PROJECT REPORT ON

Pulse Fitness Web Platform

Subject Name : Web Designing

SUBJECT CODE : 25CAH-153

SUBMITTED BY:

Name : Kanishk Goel

UID : 25BCD10117

Branch : BCA “ Data Science ”

Group: 2 B

Section: 25BCD'2b'

Semester : 2

SUBMITTED TO:

Name : Preeti

D.O.SUBMISSION : 25 March 2026

Designation : Profeser

Sign:_____

Project Report: Pulse Fitness Web Platform

1. Project Overview

Project Title: Pulse Fitness – Modern Club Management Frontend

Technology Stack: HTML5, CSS3 (Flex-box & Grid)

Target Audience: Fitness enthusiasts, gym owners, and individuals seeking specialised nutrition/training guidance.

2. Problem Statement

Many local gym websites are outdated and not mobile-responsive. Users often struggle to find clear information regarding specific training programs or dietary guidance (especially high-protein vegetarian options) on a single, clean interface. This project aims to bridge that gap with a high-performance, modern UI.

3. System Requirements

Hardware Requirements

- **Processor:** Intel i3 or higher (or Apple M-series Silicon).
- **RAM:** 4GB minimum.
- **Storage:** 100MB for source files and assets.

Software Requirements

- **Operating System:** Windows 10/11, macOS, or Linux.
- **Editor:** Visual Studio Code or any text editor.
- **Browser:** Google Chrome, Firefox, or Safari (for testing responsiveness).

4. Architecture & Design

The project follows a **Single Page Application (SPA)** layout style to ensure a seamless user experience.

Component	Description
Navigation	Sticky header with smooth scroll links.
Hero Section	High-impact visual using CSS linear-gradients and background-blend-mode.
Programs Grid	Responsive CSS Grid layout that adapts to screen size (Desktop: 3 columns; Mobile: 1 column).
Nutrition Callout	Dedicated section for specialized diet plans (Vegetarian/High-Protein).

5. Implementation Details

- **Semantic HTML:** Used tags like `<header>`, `<section>`, and `<footer>` to improve SEO and accessibility.
- **CSS Flex-box :** Utilised for the navigation bar to maintain alignment between the logo and menu items.
- **CSS Grid:** The `grid-template-columns: repeat(auto-fit, minmax(250px, 1fr))` property ensures the training cards wrap automatically on smaller screens without requiring dozens of media queries.
- **Typography:** Integrated Google Fonts (Poppins) to give a professional, athletic aesthetic.

6. Future Enhancements

1. **BMI Calculator:** Integrating a JavaScript tool to help users calculate their body mass index.
2. **User Dashboard:** A backend integration using Python or Node.js to track workout progress.
3. **Diet Tracker:** A feature to log daily protein intake, specifically for vegetarian diets.

7. Output (Screenshot)

8. Conclusion

The Pulse Fitness project successfully demonstrates the use of modern CSS techniques to create a high-conversion landing page. It provides a foundation for a scalable fitness platform that could eventually include data-driven insights for personal training.

Would you like me to generate a **Table of Contents** or a **Bibliography** section to make this look even more official for your university submission?
